**Dan Zuberi : Cleaning Up: How Hospital Outsourcing Is Hurting Workers and Endangering Patients (The Culture and Politics of Health Care Work)** before purchasing it in order to gauge whether or not it would be worth my time, and all praised **Cleaning Up: How Hospital Outsourcing Is Hurting Workers and Endangering Patients (The Culture and Politics of Health Care Work)**:

To cut costs and maximize profits, hospitals in the United States and many other countries are outsourcing such tasks

as cleaning and food preparation to private contractors. In *Cleaning Up*, the first book to examine this transformation in the healthcare industry, Dan Zuberi looks at the consequences of outsourcing from two perspectives: its impact on patient safety and its role in increasing socioeconomic inequality. Drawing on years of field research in Vancouver, Canada as well as data from hospitals in the U.S. and Europe, he argues that outsourcing has been disastrous for the cleanliness of hospitals—leading to an increased risk of hospital-acquired infections, a leading cause of severe illness and death—as well as for the effective delivery of other hospital services and the workers themselves. Zuberi's interviews with the low-wage workers who keep hospitals running uncover claims of exposure to near-constant risk of injury and illness. Many report serious concerns about the quality of the work due to understaffing, high turnover, poor training and experience, inadequate cleaning supplies, and on-the-job injuries. Zuberi also presents policy recommendations for improving patient safety by reducing the risk of hospital-acquired infection and ameliorating the work conditions and quality of life of hospital support workers. He makes the case that hospital outsourcing exemplifies the trend towards "low-road" service-sector jobs that threatens to undermine society's social health, as well as the physical health and well-being of patients in health care settings globally.

"While this empirically informed book makes for a quick and easy read, it is both informative and thought-provoking. Zuberi's book provides a wealth of evidence that the outsourcing of hospital jobs has resulted in deteriorating working conditions and that, in turn, such conditions are the cause of an increase in hospital acquired infections. . . undoubtedly a valuable addition to the literature on the quality of care in hospitals and its links to the privatisation and out-sourcing of healthcare services." Eleanor K. Johnson, *Sociology of Health and Illness* (June 2015) "*Cleaning Up* affords its readers crucial insight into the healthcare industry, closely examining the social and economic costs of profit-driven healthcare. Healthcare policy affects so many people: workers, patients, and all of their families. Zuberi succeeds in proving his point: it is time to take action to improve our healthcare system." Michelle A. Dressner, *Monthly Labor* (December 2015) "Researchers sensitive to the plight of low-wage workers in advanced industrialized economies have long sought to convey the magnitude of the problem by retelling sorrowful tales of worker exploitation. Sadly, even their most sympathetic readers have numbed to these accounts. Author Dan Zuberi has found a clever way to transcend this apathy in his new monograph based on about 100 interviews plus behind-the-scenes observations of the impact of hospital support staff outsourcing on patients and workers." Adam Seth Litwin, *Work and Occupations* (October 2014) "A book like this could easily read as a litany of woe and injustice, but the final chapter, simply titled *Cleaning Up*, seeks to provide a roadmap forward that addresses HAIs and worker justice. . . The book is written in an engaging and polemical style and the subject matter lends itself to catchy chapter titles and by-lines." Shaun Ryan, *Journal of Industrial Relations* (November 2014) "In *Cleaning Up*, Dan Zuberi describes the alarming trend of rising hospital-based infection rates in North America. In compelling detail, he discusses the key role that hospital cleaning staff play in this problem and links rising rates of infection to deteriorating employment conditions. He shares the results of a qualitative research project he conducted that unveils the extreme financial difficulties many of these workers have experienced in the wake of the outsourcing of their jobs. He goes on to argue that while outsourcing may save money in the short term, it leads to deteriorating working conditions and living conditions for the cleaning staff, reduces the effectiveness of team functioning in hospitals, and may ultimately increase costs." Christopher Paul Landrigan, MD, MPH, Harvard Medical School, Brigham and Women's Hospital, and Children's Hospital Boston About the Author Dan Zuberi is Associate Professor of Social Policy at the University of Toronto. He is the author of *Differences that Matter* and *Cleaning Up*, both from Cornell.
