**Andrei V. Belyi, Kim Talus : States and Markets in Hydrocarbon Sectors (International Political Economy Series)** before purchasing it in order to gauge whether or not it would be worth my time, and all praised States and Markets in Hydrocarbon Sectors (International Political Economy Series):

Research on the role of states and markets in the hydrocarbon sector is highly topical in contemporary International Political Economy. This edited collection will approach this subject from a broader perspective, investigating the very essence of the interaction between the state and the market and how this varies on a regional basis.

“The aim of this book is to illuminate the multifaceted interaction between the state and the market in the hydrocarbon sectors . . . this book will appeal to a comparatively large readership, including scholars and graduate-level students in international relations, law, public policy, public administration, and sociology. . . . this book a rewarding read for both established and emerging scholars in the field of energy politics and policy.” (Jale Tosun, *Journal of World Energy Law and Business*, 2017)
